

2 Dart Outs 110 - 101

out chart legend

In this section I am giving the options for outs with 2 darts left in hand. The first region from 101 to 110 contains 4 numbers that can be shot out with 2 darts over the bull's eye. Here we go:

110	 T20 - D25	
107	 T19 - D25	
104	 T18 - D25	
101	 T17 - D25	

2 Dart outs 100 - 71

Within this big range all numbers require a treble + a double. This table is pretty much like the usual "out charts" you might know, with the one exception that I give more variations when possible. For a better understanding of outs it will be very helpful if you compare these options with those options given for 3-dart outs. If there are differences, try to understand why!

100	 T20 - D20	
98	 T20 - D19	
97	 T19 - D20	
96	 T20 - D18	
95	 T19 - D19	
94	 T18 - D20	
93	 T19 - D18	
92	 T20 - D16	
91	 T17 - D20	

90	 T18 - D18	
89	 T19 - D16	
87	 T17 - D18	
86	 T18 - D16	
85	 T19 - D14  T15 - D20	
84	 T20 - D12  T16 - D18	
83	 T17 - D16	
82	 T18 - D14  T14 - D20   D25 - D16 *	* if you are forced to go out in 2 darts then the bull's eye is not a good option. Treble 18 or Treble 14 are much easier to hit.
81	 T19 - D12  T15 - D18	
80	 T20 - D10   T16 - D16	
79	 T19 - D11  T13 - D20 *	* this is not a good option, although with 2 darts it is somehow playable. It is absolutely not suitable for percentage play!

78	 T18 - D12	
77	 T19 - D10  T15 - D16	
76	 T20 - D8	
75	 T17 - D12  25 - D25 *	* whether this is a useful option with 2 darts is up to you. It's a dangerous and difficult one, but you don't need a treble. I use it sometimes, but I'm not convinced if that is a smart idea.
74	 T14 - D16  T18 - D10	
73	 T19 - D8  T11 - D20 *	* this is sometimes played, but it makes no sense at all.
72	 T20 - D6  T16 - D12  T12 - D18	
71	 T13 - D16  T17 - D10	

2 Dart outs 70 - 61

This is the "magic" number range. If you want to have a "guaranteed" dart at a double then you have to go for the single that leaves bull's eye. A recommended way is to go for the respective single's treble. This will give you the chance to leave a "normal" double (although often a "bad" one) if you hit the treble, and the "emergency exit" on bull's eye if you hit the single. Logic

behind it: We go for the treble 'cause a bad double is still better than the difficult bull's eye; and a chance at bull's eye is better than no chance at all.

If you have time for percentage play then you should treat this region as if you had 3 darts for it. This path is given here with the red dot mark (you shouldn't play it if you have to go out in 2!), combined with the percentage sign.

70	 T20 - D5 (20 - D25)   T18 - D8	
69	 T19 - D6 (19 - D25)	
68	 T18 - D7 (18 - D25)   T20 - D4	
67	 T17 - D8 (17 - D25)	
66	 T16 - D9 (16 - D25)  T10 - D18	
65	 T15 - D10 (15 - D25)  25 - D20 *	* with 2 darts this option is hazard 'cause you might hit the bull's eye with the first dart, leaving no chance at a double.
64	 T14 - D11 (14 - D25)   T16 - D8	

63	 T13 - D12 (13 - D25)  T17 - D6	
62	 T12 - D13 (12 - D25)   T10 - D16	
61	 T11 - D14 (11 - D25)  25 - D18 *   T15 - D8	* see 65
